The book is the second volume recording biblical period epigraphic material from the Josef Chaim Kaufman collection. The first volume published in 2003 consists of 516 Hebrew clay seal impressions on bullae and two seals.

The present volume includes 387 specimens: 88 seals, 248 seal impressions on bullae and 51 stamped ceramic jar handles. Out of the 88 seals, 84 are Hebrew, one is anepigraphic, one is Hebrew Phoenician, one is Hebrew Aramaic and one is Moabite. Six seals were previously published and 82 seals are presented for the first time. The Hebrew seals, including the Moabite seal, are to be dated to the 8th through the beginning of the 6th century B.C.E., before the destruction of Jerusalem by Nebuchadnezzar II in 586 B.C.E., while the Hebrew Phoenician and the Hebrew Aramaic seals are dated to the post exilic period in the 5th century B.C.E. The seal collection was formed during the last four decades, since 1967, purchased one by one from antiquities dealers, mainly in Jerusalem.

The bullae are all Hebrew except for three anepigraphic and two Hellenistic. They were impressed by 231 different seals and there are 17 duplicates. The Hebrew Bullae are to be dated to the end of the 8th through the beginning of the 6th century B.C.E. All are previously unrecorded. This group of bullae was collected since the publication of the first volume. Their possible provenance is the biblical town of Keilah (Josh. 15:44), located 13.5 Km. north-west of Hebron.

Out of the 51 stamped handles, seven are of the *lmk* type, impressed by seven different seals. The majority, 42 handles are impressed by 33 different official seals with nine duplicates. They are to be dated to the end of the 8th century, before 701 B.C.E. in the time of Hezekiah king of Judah. The two remaining handles are from the Persian Period.

The recent tendency expressed by some scholars, to declare all unprovenanced antiquities “questionable” and therefore worthless, is an approach which is to be unequivocally rejected. Such an attitude is rather destructive, instead to adopt a constructive approach. The corpus of ancient Hebrew inscriptions unearthed in controlled excavations is significantly smaller than that from unprovenanced sources. Avoiding most of the historical information just because the material was found by non professional plunders is inconceivable.

A proper analogy is the Dead Sea Scrolls which were found by local Bedouins. Today, no scientific biblical research can be even imagined by ignoring them. The same is valid concerning the 14th century B.C.E. cuneiform el-Amarna clay tablets. The majority were found by farmers on the east bank of the Nile, about 300 Km. south of Cairo and only a minority were uncovered by archaeologists. The tablets, which are part of the diplomatic correspondence between the Egyptian royal court and the Canaanite city-kings, are records revealing invaluable historical information unknown from other sources. Such documents can not be ignored simply because were not found in methodological excavations.

The importance of this volume is self-evident and is to be considered as rescue publication. It's permanent value will increase as time will pass and it will serve as valuable reference book.
